Description of the Major:

The Exercise and Sport Science program provides students with a well-rounded background in the human movement sciences. Students acquire the knowledge, skills and abilities necessary to lead others in the area of health-enhancing physical activity and movement. The program’s foundation courses in areas such as biology, anatomy, chemistry, and physiology provide a scientific basis for human movement, while courses in areas such as biomechanics, exercise physiology, sport/exercise psychology, exercise testing and prescription, strength and conditioning, and motor behavior introduce students to the multidisciplinary study of movement.

The Student Experience:

- There is rapid growth in the fitness/wellness industry, sport sciences and allied health care professions. This growth creates a need for graduates with specialized training and a wide variety of exciting career opportunities.
- Students may focus their study to prepare for direct entry into the health/fitness industry (e.g., exercise physiologist, corporate fitness, personal trainer), for graduate/advanced study in the sport sciences (e.g., sport psychology, biomechanics, exercise physiology), or for entry into health or medical-related fields (e.g., physical therapy, occupational therapy, cardiac rehabilitation).
- Students will complete their undergraduate education with a full-semester supervised internship that aligns with their career goals.
- At the completion of academic study, students will be prepared to sit for the American College of Sports Medicine’s Health Fitness Specialist exam, a nationally-recognized certification exam recognized as a key credential in the job market.
- There are exciting opportunities to gain hands-on skills and abilities in the state-of-the-art exercise science laboratory. Students can become involved in the community fitness testing program or assist faculty in research projects.
- The local region offers unique opportunities for professional development while studying at CCU such as the chance to work with a variety of populations in the areas of health, fitness and rehabilitation. The explosive growth in fitness/wellness and physical rehabilitation centers in the region provides numerous opportunities for exercise and sport science students.

Beyond the Classroom:

Graduates of the program move on to careers in the fitness industry, corporate wellness, and physical rehabilitation to name a few examples.
