It’s time to find housing for next year! Now what??? Be prepared when you sign a lease for off-campus housing by having the following list of questions ready to pose to your potential landlord:

**Ask the landlord**

- Is this a licensed rental unit?
- Does my apartment have a working smoke alarm?
- Do you supply a fire escape ladder for upper floor apartments?
- Is the kitchen equipped with a usable fire extinguisher?
- Do you have the furnace inspected every year?
- Does the apartment have a CO detector?

**Safety Tips from UL…**

- Install UL Listed smoke detectors and carbon monoxide (CO) alarms outside every sleeping area and near fuel-burning appliances.
- Install fresh batteries in your smoke detectors and CO alarms at least once a year.
- Develop and practice a fire escape plan for your housemates. Every roommate should know at least two ways out of each room.
- Test your smoke detectors and CO alarms regularly and clean them as indicated in the use and care booklet. Hardwired units, those permanently wired into your home’s electrical system, should be tested monthly. Battery-operated units should be tested weekly.

**Household Fire Extinguishers**

In addition to working smoke detectors, every household should have UL Listed fire extinguishers strategically placed in rooms such as the kitchen, garage or workshop.

Don’t just hang your extinguisher on the wall or in the cupboard! Plan ahead, read the instruction manual and know your extinguisher's capabilities before trying to fight a fire. Portable fire extinguishers are useful for putting out small fires, but recognize your limits and the limits of the extinguisher.

Using the wrong type of extinguisher on a fire can actually make it spread so it’s important to plan ahead when purchasing and placing fire extinguishers.
There are four types of household extinguishers:
The manufacturer's use and care booklet provides guidance on the type and size of fire with which your extinguisher may be used. The booklet also provides tips on how to properly use and maintain your extinguisher.

Here's some basic rules to keep in mind when dealing with household fire extinguishers:

If a fire breaks out, your first step is to call the fire department and get everyone out of the house. If the fire is not spreading and is confined to a small area, use the appropriate type extinguisher for the fire. Know both your limits and the fire extinguisher's limits.

Periodically inspect your extinguishers to determine if they need to be recharged or replaced. Extinguishers need to be recharged or replaced after each use -- even if you haven't used all the extinguishing agent.

When using a portable extinguisher, keep your back to an unobstructed exit that is free from fire.

Check the manufacturer's instructions for operating guidelines, including proper distance between the extinguisher and fire. Always aim at the base of the fire.
