      of a modern consciousness within the art of Europe and the United States from 1840 to 1940.
      The progressive advance of stylistic movements during a time of industrial change and
      colonial expansion includes realism, impressionism, post-impressionism, expressionism,
      cubism, dada, surrealism, and others. The impact of non-European traditions on the growth
      of a modern aesthetic is explored. F

      ENGR 302 - Materials Science for Engineers (3 credits) (Prereq: CHEM*111 and
      CHEM*111L, or permission of the instructor) This introductory course in materials science
      is designed primarily for engineering students who wish to understand the relationships
      between a material’s structure, processing and properties (electrical, mechanical, and
      thermal). All levels of structure are considered: from macro structures easily visible to the
      eye through electronic structure of atoms. F.

   b. ENGR 234- Engineering Mechanics I: Statics
      Proposed revision(s): Change to course corequisites and course description (Form A – ID#

ENGR 234 - Engineering Mechanics I: Statics (3 credits) (=PHYS 234) (Prereq: PHYS 211 or permission of instructor) (Coreq: MATH*161 or MATH*161A or MATH*161B) This course deals with systems of forces acting on particles and rigid bodies at rest. The course addresses the finding of resultant forces and torques for various bodies. The covered topics include concentrated and distributed forces, equilibrium in two-and three-dimensions, moments, couples, and other key principals used in engineering design of structures that must remain static while bearing stress or performing a task.
